

Infor Enterprise Performance Accelerator Kit

Run faster. Run smarter.

Deploying Enterprise business solutions and ensuring all employees are trained on all your business processes and systems is no easy task. Like most companies in the current economy, you're trying to do more with less—and the pressure on your employees to get things right, the first time is greater than ever. Add in new regulations that force you to adhere to strict compliance standards, and the need to document and capture critical business processes becomes even more critical.

The Infor™ Enterprise Performance Accelerator Kit (EPAK) can help you meet these challenges, so you reduce costs and errors and recognize ROI more quickly.

Leverage experience.

Deploying software is more than an exercise in systems integration. The success of your implementation ultimately depends on your ability to configure the solution to meet your business needs, and provide the tools, processes, and training your employees need to quickly get up to speed with your new solutions and comply with your new business processes. Infor has mitigated the complexity of software program roll-out by offering EPAK—a comprehensive software lifecycle solution. EPAK is a proven solution developed for an organization's specific deployment requirements to help employees adopt Infor's solutions faster, ensuring ROI is realized sooner. This complete simulation platform addresses pre-installation to post go-live requirements and is flexible enough to work within your organization's existing IT infrastructure.

Infor EPAK gives your organization a single platform, with consistent formatting and messaging, for all your process and software evaluation documents, as well as the tools you need to increase employee productivity.

Get business specific.

With the EPAK simulation platform, from a single recording and editing session, you get 12 deliverables.

EPAK serves your organization across the entire software lifecycle—before, during, and after implementation.

Pre-implementation: EPAK can help you evaluate functionality, and conduct user acceptance testing, business process reviews, and approvals in a consistent format.

During implementation: EPAK provides tools for instructor-led and web-based training, as well as usage tracking and user acceptance training.

Post-implementation: EPAK can be used to deliver job aids, product assistance, simulations, application coaching, and usage tracking.

No matter what stage of the software lifecycle, Infor EPAK gives your organization a single platform, with consistent formatting and messaging, for all your process and software evaluation documents, as well as the tools you need to build your employee skill sets and increase employee productivity. This helps ensure the consistency you need across projects and teams.

See results now.

Infor EPAK can help you:

- Increase employee productivity fourfold
- Create business processes from 50 to 75% faster
- Reduce costs and errors

We accomplish these results by simulating your business processes in the EPAK training environment to ensure that all of your employees have the skills they need to succeed in your business.

EPAK can increase employee productivity by as much as 20%, while at the same time reducing the number of transaction errors. So, you get a more productive, more successful workforce, as well as lower costs and higher customer satisfaction rates. With EPAK and Infor solutions, you're ready to do business better so you can realize ROI faster.
